***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a logic tree branch, classified in class 349, subclass 193.
- II. Claims 12-59, drawn to a logic tree or a logic tree display array, classified in class 349, subclass 74.
- III. Claims 60-71, drawn to a method of fabricating an array, classified in class 349, subclass 187.

The inventions are distinct, each from the other because:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims 12 and 25 are the evidence claims showing that the logic tree or the display array does not need the particular structure of the logic tree branch of claim 1 for patentability. The subcombination has separate utility such as a light beam dividing switch.

Inventions III and I, III and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process

(MPEP § 806.05(f)). In the instant case, the logic tree branch, the logic tree or the display array can be made by another and materially different process such as employing a plurality of micro mirrors, instead of employing a plurality of insulating media having a plurality of wavelength and polarizing elements embedded therein.

Because these inventions are distinct for the reasons given above and the search required for one Group is not required for the other Groups, restriction for examination purposes as indicated is proper.

Further, Group II contains claims directed to the following patentably distinct species of the claimed invention:

A(II): claims 26, 28, 38-46 and 56-59 drawn to the Species of Fig. 3.

B(II): claims 27, 29-37 and 47-55 drawn to the Species of Fig. 4.

*If Group II is elected*, Applicant is required under 35 U.S.C. 121 to elect a *single* disclosed species of Group II for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 12-25 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
